NEW! "ELECTRO-STRIKE-OMETER"®

- WARNS THE ANGLER OF THE BITE
- BEST FITTED FOR ALL KINDS OFF-SHORE FISHING
- EASILY ATTACHED TO RODS
- ACCURATE METER READING

Modern angler's dream materialized at last! Successful fishing requires patience, alertness and excellent timing. Many good strikes have been missed due to reliance upon mere sixth sense. Illustrated above is a simple device that is the result of researches made to develop an easier and more dependable way of fishing. Now, with this new ELECTRO-STRIKE-OMETER any novice angler will be able to catch timely and exactly the warning of fish bite. Fish bite is indicated by the movement of a meter needle. When fish strikes, the needle will swing within the "Care" section of the dial. As the fish proceeds to swallow the bait further, the needle will come to the "Pull Up" section on the dial. The fish will surely be caught if the line is pulled up promptly. A separate adjusting knob permits adjustment of maximum swing as well as sensitivity of needle. Screw type adjustment in the back permits adjustment of zero position of the needle. This lightweight unit can be easily mounted on any reel rods or short rods for off-shore fishing. The 1.5V dry cell can be replaced easily. The whole unit is housed in a rugged metal-grey plastic body. Can be used under any weather condition. Size 6x1x1". Shpg. wt., 4.5 oz.

SK-131—LAFAYETTE SPHERICON SUPER TWEETER Net 19.50

At long last the breakthrough in High-Frequency Speaker design. Here is a tweeter with unequalled performance, engineered for today's high compliance stereo speaker systems. The Lafayette Sphericon represents a complete departure from Electrostatic tweeters, which are extremely inefficient—indeed so much so that it is often necessary to utilize an L-pad on the woofer in order to hear the tweeter properly, thereby lowering the efficiency of the woofer to the same level as that of the Electrostatic tweeter. In the case of many high compliance low effi-

ciency units this is disastrous, as an already inefficient speaker is made even less efficient. The Lafayette Sphericon, due to its high sensitivity may be coupled to any speaker system with no loss in speaker efficiency. As a result less amplification is needed assuring lower distortion. Equipped with a built-in 3000 cycle crossover network the Sphericon produces a smooth linear response from 3,000 cps to beyond 40,000 cps; within plus or minus 1 db from 3000 cps. to supersonic frequencies. A specially designed domed phenolic diaphragm delivers

phenomenally smooth, silky, faithful highs radiating a pattern of 120° in all directions, vertically as well as horizontally—with no trace of stridency or harshness. Power capacity is 30 watts. May be used with any 4-16 ohm speaker. Beautifully styled with an acoustically designed gold anodized aluminum grill set in a sturdy satin black plastic case. Shpg. wt., 3 1/2 lbs.

- UNIQUE 8" WOOFER-MIDRANGE ASSEMBLY
- COMPRESSION — HORN TWEETER
- 6 DB PER OCTAVE ELECTRONIC CROSSOVER WITH LEVEL CONTROL
- SOLID 3/4" VENTED DUCT PORT BOOKSHELF ENCLOSURE

"Trioette"—The perfect blending of attractive bookshelf cabinet and advanced audio design (years ahead of other engineering efforts along these lines). The exceptional smoothness and cleanliness of the bass and mid-range is the product of a unique 8" woofer-midrange speaker design employed in a solid 3/4" acoustically lined vented duct port enclosure. Two separate cones are coupled through a common voice coil, with the outer edge of the midrange cone attached and floating on the flexible corrugated edges of the woofer cone. This results in a mechanical crossover with an absolute minimum of distortion, so that both cones operate in phase at low frequencies, but only the midrange cone transmits the mid-frequencies. The heavy magnets provide high efficiency and excellent transient characteristics. Smooth extended high frequencies are brilliantly reproduced by use of a com-

pression horn tweeter utilized with an electronic crossover and level control provided for balancing the system according to individual listening tastes. Impedance 8-16 ohms. Integrated power handling capacity 20 Watts. Dimensions: 23" W x 11 1/2" H x 11 1/2" D. Complete with easy to follow speaker installation instructions.

COMPRESSION HORN TWEETER WITH 2 or 3 WAY CROSSOVER

Versatility is the byword in this combination of the famous Lafayette SK-105 tweeter and LN-7 crossover. The Lafayette LN-7 6 db per octave crossover may be utilized as a 2-way at 500 cps or 3300 cps now—and in the future, by the addition of a mid-range speaker, it will become a 3-way, crossing over at 500 cps and 3300 cps. Rated at 20 watts of continuous power the Lafayette SK-105 tweeter will extend system response up to 16,000 cps. The very high flux density of 13,500 gauss guarantees excellent efficiency and essentially flat frequency response. Ruggedly built from a one-piece casting and carefully designed to eliminate unwanted resonance in the audio range, its attractive styling permits mounting on top of the speaker enclosure or, optionally, within the enclosure. Impedance 8-16 ohms. Shpg. wt., 5 1/2 lbs.

THE ELIPTOFLEX

THE PROBLEM: With the advent of stereo, the use of two massive unwieldy speaker systems become unfeasible in most of today's combination living room—music room areas. One answer to this problem was the air-tight bookshelf speaker systems of which there are many excellent variations. However this design is inherently inefficient and requires costly high wattage amplification.

THE SOLUTION: The "Eliptoflex" is the latest development from Lafayette's acoustic laboratories. It is the result of an intensive research program to develop a bookshelf enclosure that may be utilized with any efficient 12" full range, coaxial or triaxial speaker. It may also be used with a 12" woofer, separate tweeter and crossover. Utilized with a proper speaker the "Eliptoflex" achieves a degree of natural smoothness coupled with low distortion and a rich, robust bass hitherto found only in large speaker consoles or inefficient bookshelf systems many times its price powered by large amplifiers. With the "Eliptoflex" there is no need for costly high wattage amplification due to its highly efficient design characteristics.

There are two departures from convention which contribute to the excellence of the "Eliptoflex" performance: one, the elliptical port, and two, the diffracting ring.

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-panel extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provides an extremely smooth transition from duct to free air, broadens the frequency response at which it is effective and provides better transient response. Mixing the front and rear radiation from the loudspeaker diaphragm in this manner produces a truly coaxial presentation over the complete frequency spectrum. The tonal unity is such that no separation of source can be detected between high, middle and low frequencies. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. The result is a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation.

Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstrably superior throughout the audio spectrum.

The "Eliptoflex" is beautifully finished in a variety of hardwood veneers for attractive room placement. Dimensions are 14" H x 23-7/16" W x 13-5/16" D.

SK-124 MECHANICAL 2-WAY SPEAKER SYSTEM SET OF TWO SK-124 SPEAKER SYSTEMS FOR STEREO

Lafayette has indeed wrought a small miracle in engineering such acoustic excellence into so small a package. Smooth, distortion free response with a deep fundamental bass and clean pure highs that give no indication of its small size and price. The perfect speaker for that high quality installation in your home, office or restaurant—two are ideal for stereo. The speaker features unique dual cone construction with extra heavy magnets. Both tweeter and woofer "float" on flexible, corrugated edges with the outer edge of the tweeter cone attached to the mid-section of the woofer cone. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. The same type of wide-range frequency response normally found only in true coaxial or multiple speaker systems is provided. Frequency response of 40-16,000 cps. Impedance 8-16 ohms. Cabinet is finished on 4-sides in hand-rubbed mahogany and walnut for attractive horizontal or vertical placement anywhere in the room. Dimensions are 10 1/4" H x 18-7/16" L x 8-7/16" D. THE NEW ULTRA-LINEAR SK-128 FULL RANGE 8-INCH DUAXIAL SPEAKER WITH NEWLY DEVELOPED TWEETER BAFFLE DESIGN.

- 40 TO 16,000 CPS—FLAT WITHIN 3 DB ■ HIGH EFFICIENCY
- HIGH EXCURSION WOOFER WITH UNIQUE "CONICAL STIFFENER" ■ HANDLES HEAVY BASS PASSAGES WITHOUT "DOUBLING"

Eccentric Tweeter Mounting & Unique Elliptical Baffle Completely Eliminates Interaction Between Woofer & Tweeter

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. The specially treated woofer cone has a unique "Conical Stiffener" at the apex which, coupled with its high compliance, enables the cone to operate in a piston-like manner—delivering a clean, powerful bass response. The 2-inch tweeter has its own voice coil and magnetic field. Special treatment of cone and cone edge provides even distribution of the high frequencies, with no peaks or resonances. The unusual off-center mounting of the tweeter and its elliptical baffle minimizes interaction between tweeter and woofer and insures an overall response free of intermodulation distortion. Electrical crossover from the woofer cone to the tweeter unit is provided by a

built-in network. An adjustable brilliance control permits matching of sound to room acoustics. Efficiency of the speaker is such that it will operate from any amplifier with an output of 1 watt or more. Installed in a bass-reflex type of enclosure, it performs outstandingly, and is recommended for all high-quality music systems—whether monaural or stereophonic. SPECIFICATIONS: Overall Response: 20-20,000 cps (40-16,000 cps ± 3 db). Free air Resonance: 45-65 cps. Impedance: 8 ohms. Power Rating: 20 watts Integrated Program Material. Crossover: 2,500 cps. STEREO AUDIO ANALYST SINGLE NEEDLE—DUAL CHANNEL VU BALANCE METER

TM-66
11.95

- UNIQUE TWO COIL GALVANOMETER TYPE PRECISION METER MOVEMENT
- SEVEN RANGES OF METER SENSITIVITY
- EFFORTLESS BALANCING OF STEREO SYSTEMS
- PROVISION FOR USE AS VU METER AND TAPE RECORDER LEVEL INDICATOR
- MAXIMUM METER SENSITIVITY 120 ua

The TM-66 provides the solution to all stereo balancing problems. This unique precision meter movement utilizes 2 separate coils set in a single magnetic field. Each stereo channel feeds a separate coil through a full wave bridge rectifier. When both signals are equal and balanced the resultant deflection on the scale will measure 0. Unlike conventional stereo indicators having two unrelated movements, calibration of one meter against the other (channel A vs. channel B) is unnecessary. Since the two separate coils interact within a single magnetic field, the single needle movement acts upon channel A and channel B simultaneously, automatically maintaining the unit in constant calibration. Individual channels may be measured by

means of the two slide switches. An extremely stable meter action and protection from peak voltages is provided by special damping networks. Since the unit is in continuous calibration the need for individual range controls are eliminated. The single seven step range control serves for both channels and facilitates the use of the meter with all amplifier power levels. By properly positioning this control the movements may be used as VU meters when terminated across the 600-ohm load. The scales are calibrated in "Volume Units". Sensitivity is 1.2 volts, for 0 vu or 100 percent indication. The metal case is finished in a rich satin gold. Overall size is 4 1/4" L x 5 1/2" H x 4-3/16" W.

HFT-90

KIT \$39.95 Wired \$65.95 Cover \$3.95

Newly-designed, extremely sensitive, low-noise "front end" supplied in a cast housing completely pre-wired, pre-aligned, ready to use. This new front end, for the first time makes it completely practical even for a novice to build an FM tuner equal to really good professional factory-wired units. Employs the broad-band detector circuitry used in \$169 FM tuners now on the market. Temperature-compensated components and advanced circuitry completely eliminate need for AFC. Drift is less than 2 parts in 10,000 from cold start. Sensitivity is 6 times greater than other kit tuners and equals that of the most expensive wired tuners; it is 1.5 uv for 20 db quieting. Radiation suppressed far below FCC standards. Also features new DM-70 traveling tuning eye. Input 300 ohms, IF bandwidth 260 kc, detector separation of 600 kc. Freq. resp. 20-20,000 cps ± 1 db. Audio output 1 V for 10 uv input with 75 kc deviation. Hum 60 db below 1 V. Cathode follower and multiplex outputs. Flywheel slide-rule tuning, AGC, stabilized low limiting threshold for excellent performance from weaker signals, broad-band ratio detector for improved capture ratio and easier tuning, full-wave rectifier and heavy filtering, very low distortion. Uses 1-ECC85/6AQ8, 3-6AU6, 1-6AL5, 1-6C4, 1-DM70, 1-6X4. Flexible "low silhouette" design adaptable to any panel thickness for console installation; optional cabinet. HWD: 3 1/2" x 12" x 8 1/2". Operates from 110-125 VAC, 60 cps line.

- JEWEL BEARING SUPPORT
- INSTANT PLUG-IN CARTRIDGE CHANGE
- AUTOMATIC FLUID CONTROL
- PERFECT RECORD TRACKING
- ACCOMMODATES MOST STEREO & MONAURAL HIGH FIDELITY CARTRIDGES

This Stereo/Monaural transcription arm assures dependable and stable operation, utilizing the floating-action principle of viscous-damping. The arm is supported at a single pivot point by a jewel bearing having negligible friction. Damping is accomplished by a silicone fluid occupying the gap between a ball and socket. This damping control permits high compliance and negligible tracking error and prevents damage to either record or stylus should the tone arm be accidentally dropped. Low frequency resonance, skidding and groove-jumping are likewise minimized. The tone arm accepts all records up to 12" and accommodates virtually all Stereo or Monaural hi-fi cartridges by means of precisely engineered adapters which simplify installation and provide proper stylus pressure. Overall length is 12"; height adjustable from $\frac{1}{4}$ " to 2 $\frac{1}{2}$ " above motorboard; round mounting base is 2 $\frac{1}{2}$ " in diameter. Shpg. wt., 2 $\frac{1}{2}$ lbs.

RUGGED CONSTRUCTION — FOOLPROOF — TROUBLE FREE

A remarkable advance in tone arm design is presented in these new Lafayette tone arms. An unusual new principle, utilizing 2 vertical and 2 lateral hardened-steel knife-edge pivots supported by hardened steel bearings, provides extremely low horizontal and vertical friction. This unusual type of bearing provides minimum waveform distortion and no undesirable motion or loose-jointed action as viewed from the stylus end. Groove tracing is smooth, with excellent tracking even with very light pickup weight, due to the absence of frictional losses. Friction in horizontal and vertical directions is low, but mechanical impedance is high at 45°, providing maximum effectiveness with 45-45 stereo cartridges. The unique knife edge bearing construction makes it possible to draw out the 2 shielded leads from the center of the support column, eliminating "stiffness friction" due to the leads. A highly-precise bubble level is provided at the top of the support column; the bubble plus 3 adjustments on the base make for perfect levelling. Height of the arm is adjustable from 1 $\frac{1}{2}$ " to 2 $\frac{1}{2}$ " above motorboard. Overall length of PK-270 12" arm is 12 $\frac{3}{4}$ "; linear distance from support column to stylus tip is 10"; the PK-280 16" arm is 14 $\frac{1}{2}$ " overall; effective length is 11 $\frac{1}{2}$ ".

LAFAYETTE PROFESSIONAL BULK TAPE ERASER AND DEMAGNETIZER

- COMPLETELY ERASES TAPE
- REDUCES NOISE LEVEL
- FOR 3", 5", 7", OR 10 1/2" REELS
- TWO ERASING COILS
- 6 1/2 AMPERES DRAIN

Regularly 49.95 Special 21.50

A carefully designed and precisely manufactured professional tape "degusser" for complete erasing of tapes. Just place the tape reel on spindle of demagnetizer, slowly rotate 2 or 3 turns, take off, and that's all—a completely clean tape. The demagnetizer removes every signal on the entire tape—even extra strong sounds too loud to be removed by the recorder's own erase head. Completely cleans tape of any prior recordings. In addition, by leaving tape completely unmagnetized, it serves to reduce tape hiss to the level of new "virgin" tape. In fact, tape hiss is so low that subsequently passing it over the erase head of a recorder actually INCREASES noise by 4-6 db. To take advantage of this noise reduction, some users

prefer to permanently disconnect the recorder's erase head, and use only bulk erasure. Two completely separate coils are used for doubly effective erasure, even of large 10 1/2" reels. An extra powerful unit for heavy-duty use—draws over 6 1/2 amperes. The Lafayette Tape Demagnetizer offers all of these features, and at this special price. Can be used to demagnetize tape, magnetically striped film, plus tools and watches. This professional unit has a heavy, custom finished case, a rugged non-magnetic top, heavy duty on-off switch and power cord. Has built-in fuse. Pilot light prevents accidentally leaving it turned on. Size 6 1/2" x 7 1/2" x 3 1/2". Shpg. wt., 14 lbs. ML-120—Regularly 49.95 Net 21.50

LAFAYETTE TAPE HEAD DEMAGNETIZER

3.95

- REMOVABLE POLEPIECES
- EXTRA CONVENIENT

3.95

PK-238

Unlike other demagnetizers, the Lafayette Tape Head Demagnetizer uses removable polepieces. Three complete sets are furnished: straight, 45°, and 90° (right angle), permitting quick and easy use with any tape head. Tape heads need no longer be removed from the recorder so they can be reached by the clumsy polepieces of older head demagnetizers; the Lafayette Demagnetizer's polepieces reach every head.

For from being a luxury, a tape head demagnetizer is necessary for best tape recorder performance. Among all the possible sources of noise in tape recorders, there is only one which is common to all recorders and is a perfectly natural, common occurrence—tape hiss due to magnetized heads. Although unmagnetized when new, tape heads gradually become magnetized by sharp switching pulses occurring while switching the recorder from play

to record or vice versa. Some audio sources (especially the human voice) produce unbalanced signals containing more power peaks in one direction than in the other. This unevenness is also sufficient to cause magnetization of tape head.

The solution is to use a demagnetizer to remove this permanent magnetism from the head, thus reducing the noise level. Periodic head demagnetization is required for all tape recorders to insure optimum signal-to-noise ratio. For this reason, some professional tape recorders are demagnetized as often as several times weekly. Now, Lafayette enables anyone with even the most modest budget to perform this necessary demagnetization, with a minimum of effort. For 110 volts 60 cycles. Shpg. wt., 1 lb. NEW! GENERAL ELECTRIC VR-22 STEREOPHONIC MAGNETIC VARIABLE RELUCTANCE HIGH FIDELITY CARTRIDGES

- **FREQUENCY RESPONSE**
20-17,000 cps
- **UP TO 30 DB CHANNEL SEPARATION**
- **VIRTUALLY HUM-FREE**
- **HIGH COMPLIANCE**

MODEL VR-277 with .7 mil diamond stylus. Absolutely the finest of all G.E. cartridges. Combining new design and manufacturing techniques with proven variable reluctance excellence, this cartridge is made virtually hum-free by mu-metal shielding on top, entire front and coil assembly. Harmonic and intermodulation distortion are effectively minimized by a lack of resonant peaks in the audio range, and an essentially linear flux field. Precise tracking and optimum compliance are assured by new stylus and armature suspension system. The stylus is easily changed without the need for special tools. Output is closely balanced over entire frequency range (one db at 1000 cycles) for equal sound volume from both channels. A ground strap allows use of this cartridge with either 3-or-4-wire stereo systems; the cartridge shield may be grounded individually by a separate wire. **SPECIFICATIONS:** FREQUENCY RESPONSE: 20-17,000 cps; OUTPUT: 6 mv. per channel at stylus velocity of 5.5 cm/sec; INDUCTANCE: 420 mh. per channel; CHANNEL SEPARATION: up to 30 DB; LATERAL COMPLIANCE: 3×10^5 cm/dyne; VERTICAL COMPLIANCE: 2×10^6 cm/dyne; RECOMMENDED LOAD, EACH CHANNEL: 47,000 ohms; RECOMMENDED TRACKING FORCE: 5 to 7 gms; SHPG. - GANGED TONE CONTROLS
- STEREO-MONAUROUS SWITCH
- .04 VOLT SENSITIVITY
- 4 WATTS STEREO OUTPUT
- ISOLATION TRANSFORMER
- SEPARATE VOLUME CONTROLS

This is a complete 4-watt hi-fi stereo amplifier having 2 watts output per channel. Features separate volume control for each channel; ganged tone controls; Stereo-monaural switch to feed one channel to both speakers and to reverse the channels. Just right for any use where a small stereo amplifier is required—ideal for custom mounting in even the tightest locations; specially designed for small apartment sized stereo systems.

THE DIFFICULT WORK IS ALREADY DONE

The semi-kit is a new concept in test equipment kits. All the important or difficult parts are already mounted. All that remains to be done is to mount and wire in a few small parts — a job so simple you'll finish before you realize it, and best of all, you'll have one of the finest high sensitivity multitesters on the market. When used in a circuit, the high input resistance on all DC and AC ranges does away with the highly inaccurate readings

common to low resistance testers which load the circuit. Ranges: DC Volts, 0-10-50-250-500-1000; AC Volts, 0-10-50-250-500-1000; DC CURRENT, 0-500 ua, 0-10-250 ma; OHMS, 0-10K-100K-1 meg; DECIBELS, -20 to +36; PLUS 0-5000 henries and 250 mfd. to .02 mfd. The new Lafayette high sensitivity Multitester is a complete instrument (not a kit). In addition to its unusual sensitivity of 20,000 OHMS PER VOLT ON D.C. AND 10,000 OHMS PER VOLT ON A.C., and the extraordinary number and scope of its ranges, it is packed with features that would make it cost at least twice as much if made in this country. Uses 1% precision resistors, silver contacts on selector switch, 3 1/2" x 3" meter. Dependable, rugged and accurate. Even the test leads are heavy duty with high voltage insulation. Voltage source required for low capacity range is 120V A.C. for high range capacity and inductance scale is 6V A.C. Attraction: live plastic front with metal bottom. Size 6 1/2" x 4 1/2" x 2 1/2". A LAFAYETTE SPECIAL TUBE TESTER!

- COMPLETELY WIRED — NOT A KIT
- MOST ADVANCED ENGINEERING TO FIT SERVICEMAN'S NEEDS

26.95

A new streamlined tube tester with a realistic approach to the problem of quickly testing the ever increasing number of tube types. It incorporates new and advanced engineering features and all at a price of about half of even the most ordinary tube tester. Read these Specifications.

"FREE POINT" ELEMENT SELECTOR SWITCHING: Newly designed, it reduces possibility of obsolescence to a minimum because any pin may be used as a filament pin and voltage applied between it and any other pin, or even the "top cap". Tubes with tapped filaments or with filaments terminating in more than 1 pin are truly tested.

MULTIPURPOSE TUBES: Special isolating circuit allow each section of multi-purpose tubes to be tested individually as if it were in a separate envelope.

SHORTS AND LEAKAGES: Supersensitive method checks shorts and leakages up to 5 megohm between any and ALL elements; continuity between various sections individually indicated.

SIMPLICITY: Fast simple operation. The 4 position fast action snap switches are all numbered in exact accord with RMA standards. Thus when testing element terminating in pin No. 7 of a tube — you use button No. 7. You can't insert a tube in the wrong socket—there's one for each type of tube base.

TUBE TYPES: Tests all octal, loctal, 7 pin miniatures, 9 pin miniatures as well as the new novel and Sub-Minor types. Old type sockets used for testing obsolete types—that you rarely see anymore—have been eliminated.

SIZE: A practical size to carry with you as well as for use in the shop—only 8 1/2" x 6 1/2" x 2 1/2". Shpg. Wt. 5 lbs. MODEL TD-55—complete with carrying case and instructions. Net 26.95

- TESTED AT 3 TIMES WORKING VOLTAGE
- EXCEPTIONALLY RESISTANT TO HIGH TEMPERATURES AND MOISTURE
- SURPASSES PERFORMANCE OF MOLDED PLASTIC TUBULARS

They're new, they're different, and they're better! Now, at a price for less than that of ordinary plastic molded tubulars, Lafayette brings you, for every day service work, a condenser that was designed for critical industrial applications. The case is of durable gleaming porcelain, a ceramic known for its high degree of imperviousness to moisture and resistance to heat. The capacitor is of finest quality, tested at 3 times the rated voltage with much closer capacity tolerance. It maintains its characteristics under extreme conditions of heat and humidity. Its mechanical construction is excellent, the leads are firmly attached and sealed — they won't twist or break off. We've selected the most popular values and put them up in two servicemen designed kits. Each condenser is plainly marked. Each value is mounted on separate handy strips. All are conservatively rated at 600 DC working volts. See chart for contents of each kit.

NEW! Achromatic BARLOW LENS

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Improves Definition!
- Provides Greater Eye Relief!
- Greater Illumination—Wider Field!

4.95

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharpens definition and reduces image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb.

DIRECT VISION PRECISION SPECTROSCOPE

- 400-800 MILLIMICRON SCALE
- ADJUSTABLE SLIT WIDTH; DRAWTUBE SLIT FOCUSING
- HORIZONTALLY SPLIT FIELD

A prismatic type, hand-held instrument that has most features of the finest standard laboratory instruments. The millimicron scale is adjustable for sharp focus and for position (with "lock-in" feature to fix scale with relation to known spectral lines). Highest grade optics yields a broad dispersion field of high intensity obtained from best quality glass dispersing prisms, while excellent lens system resolves the closest spectral lines into 2 distinct lines. By a twist of the collar, a horizontally split field is obtained by which a comparison can be made of two light sources simultaneously. Tubes and collars are constructed of highly polished corrosion proof steel. Equally suited to laboratory or field work, the spectroscope has a wide array of applications: emission spectrometry of light sources; qualitative chemical analysis and metallurgical analysis by emission spectra; qualitative analysis of absorption spectra by examining aqueous or other solutions contained in the small test tubes provided. Absorption spectrum analysis has application in many branches of technology—color and dye chemistry, blood chemistry, clinical medicine, criminology. SUGAR REFRACTOMETER

- MODIFIED ABBE DESIGN
- READS % SUGAR DIRECT
- NO MOVING PARTS TO WEAR OUT
- CAN BE USED TO DETERMINE REFRACTIVE INDEX

Here is a beautifully constructed scientific tool of simple design, easy to operate, with no moving parts, except for the focusing eye piece. Operation is very simple. A few drops of the sample are placed on the prism, the cover is closed and observation is made by means of tungsten illumination or daylight. A perfectly clear field, completely color corrected, shows a reticle graduated in percent from 0-32%. With the sample in place as described above the field will show a sharp dividing line between a bright and dark portion; where the dividing line falls determines the reading, which can be estimated to 0.1% accuracy. The instrument can be converted to a universal laboratory type by changing % readings to "index of refraction" readings. No. (Consult Chemical Handbook or literature.) Lafayette 14" TRANSPARENT
CELESTIAL GLOBE

A true "mechanical universe," designed for and dedicated to those who recognize the challenge and adventure that lie on the frontiers of space. The concept of the celestial sphere is the most convenient means of illustrating and discussing the common motions of the stars and the individual motions of the members of the solar system. It offers an easily used and easily understood working model of our universe. An invaluable aid in visualizing and identifying the stars and constellations and their relationship to each other, to terrestrial positions and to time and date. Permits comprehensive explorations in time and space beyond the earth atmosphere. The Lafayette celestial sphere may be defined as a sphere of infinite radius with its center located at the center of the earth. This system of geocentric coordinates will illustrate the true geographic zeniths of the sun and stars at any time on any day. All systems of astronomical spherical coordinates, such as this equatorial, galactic, ecliptic, etc., which are based on the celestial sphere, rotate with the sphere. The apparent contra-rotation of the stars, actually due to the earth rotating about an axis is clearly demonstrated. The sphere will illustrate how the sky will appear at any hour—on any date—from any point on earth. With it you can tell time by the stars—learn to tell time by the sky—clearly illustrate and help solve navigational problems. Traces the orbits of man made satellites and finds their overhead positions. Serves as a superb star chart. Sun and moon positioned by external controls. Artificial satellites automatically circle around the terrestrial globe. The various stars, constellations and their identifications are permanently molded—not printed—on the celestial sphere. The celestial globe is 14" in diameter with the terrestrial globe centered within. Equipped with horizon ring—time ring—fixed meridian ring—swinging meridian ring—sun and moon pointers—fixed ecliptic—detachable "plane"—indications—universal base—and complete instructions. Shop.
